

Scarlett LOVE₂

Thank you for purchasing the Scarlett Love Overdrive V2. This is Nigel Hendroff's signature pedal and has been built to achieve "that sound" that he has in his head.

DESCRIPTION

Built on the original tone of the V1, the V2 now has less gain, and more headroom to suit Nigel's needs. We have changed virtually everything in this pedal to achieve this.

Another new feature is the revised gain knob, instead of a "standard" gain knob, the V2 blends the overdrive into the clean signal. So when the gain is set to zero, the pedal acts as a clean boost that doesn't colour your tone. The V2 still includes the 3 way clipping switch that features the Plexi, TS and Diode Lift options.

Like all Selah Effects pedals we have selected only the best components such as Nichicon, Wima, AVX capacitors and carbon comp resistors. The pedal has been tested through many amps and guitars to ensure it responds well to all kinds of rigs.

We are very proud and honoured to bring you this pedal and believe it can fit comfortably onto any pedalboard.

DIRECTIONS

There are 3 control knobs, Gain, Tone, and Volume. The 3 are completely interactive with each other; turning the Volume up under different settings will produce varied results.

Clipping Switch

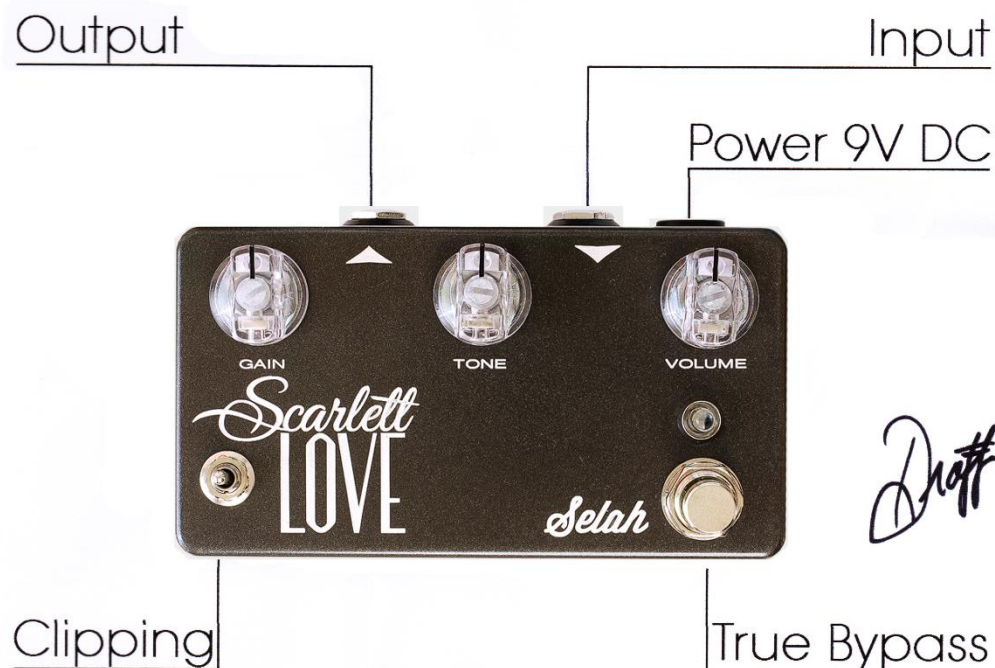

Left Position - In the left position you get a Marshall Plexi type sound, great for rock and rhythm. The middle.

Middle Position - In the middle position is a clean boost which has the feel and dynamics of a cranked tube amplifier.

Right Position - The right position runs a-symmetrical clipping, giving that classic tube screamer sound.

SPECS

- 9v Centre Negative Power
- 122 x 66 x 39.5mm
- True Bypass
- Hand Wired
- 100mA current draw
