

Misty Mountain Fuzz

DESCRIPTION

Thank you for purchasing the Misty Mountain Fuzz, we hope you enjoy it!

We all enjoy fuzz pedals but get frustrated with the lack of usability and options available. We set out to create a pedal that can pull classic 8bit fuzz tones but also be used as a full and rich overdrive/distortion.

As in all our pedals we have spent countless hours sourcing the best components for the job. All pedals come in a vintage powder coated baby blue with engraved text and images. We think all guitarists will benefit from this pedal and will enjoy its unique sounds and usability! Much of the low end is retained so Bass Guitarists can also use this pedal to create huge sounds.

SPECS

- 9V DC Center Negative power only
- 111 x 60 x 27mm
- True Bypass
- Hand Wired

DIRECTIONS

The Misty Mountain Fuzz has 4 interactive controls; Level, Tone, Gate and Mist. The Gate is what separates the usable from the insanity. Ranging from smooth amp like overdrive/distortion to an old super Nintendo. The Mist is what sets the gain, it allows the user to dial in a gain level suitable for most styles of playing.
